NiceLabel Print Center

The enterprise solution for client/server based label printing and centralized system management

Maximize productivity by optimizing the use of your human and infrastructure resources, improving production workflow and supply chain management with NiceLabel Print Center. The NiceLabel Print Center enables you to organize and manage your barcode label and RFID printing system inside and outside of your enterprise.

The enterprise module for server based printing, centralized document, printer and event management:

- **NiceLabel Enterprise Print Manager** – The enterprise module for remote printer, print queue, event and alert management
- **NiceLabel Suite** – The full-featured, modular labeling solution for label design, integration and professional printing requirements

The **NiceLabel Print Center** is a client/server-based enterprise-level labeling solution with centralized control over all NiceLabel clients in a network environment. The **NiceLabel Print Center** enables you to:

- Design and print labels on local client computers.
- Overview, control and remotely manage the printing process.
- Print labels from a Web browser without any local labeling software installation.
- Optimize your infrastructure by analyzing performance with executive reports.

You can manage your printing process through the **Enterprise Print Manager**, which is a web-based module that you can access from any workstation on your network or through the Internet. Real time printer status monitoring and a multi-channel alerting system minimizes the risk of long-lasting production line standstills and ensures that you learn immediately about a label printing error, warning or simple confirmation of an executed print job.

Storage Server allows users to centrally manage and access all labels and label related documents.

Enterprise Print Manager

The enterprise module for server based printing, centralized document, printer and event management

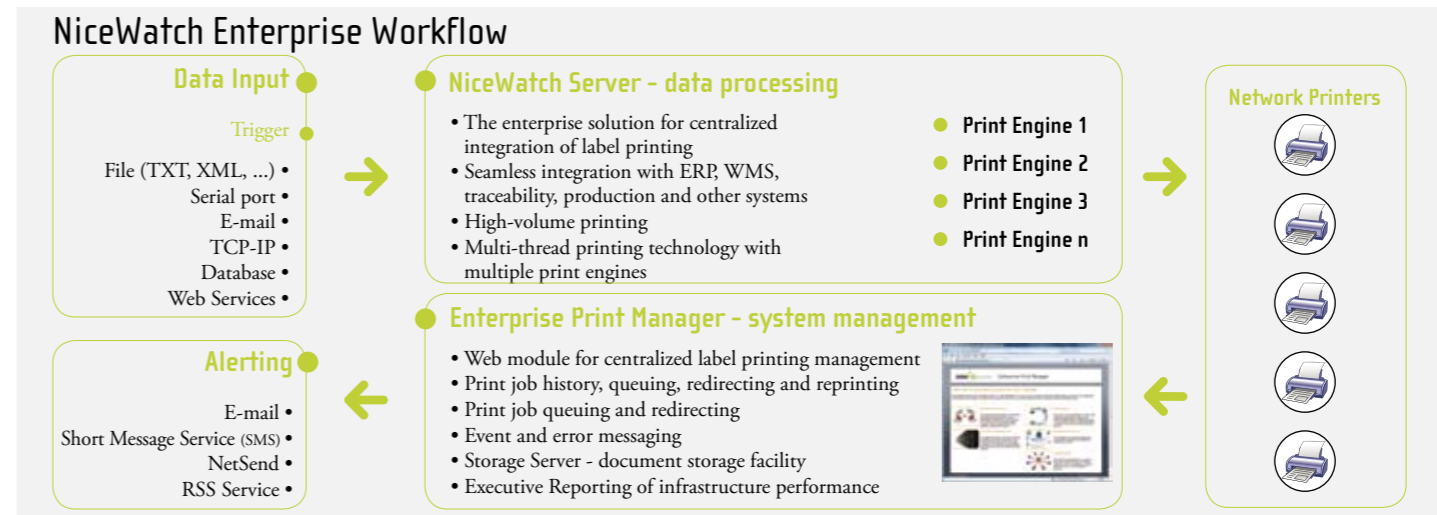

Enterprise Print Manager is an essential part of the NiceLabel Print Center and NiceWatch Enterprise products. It is a web-based application, which allows you to use a standard Web browser from any workstation on the network to perform operations such as:

- Remotely control the label printing process through the company's Intranet and the Internet
- Simple licensing and file storage system – always find the right template with one click from any computer.
- Central print management – printer status, print queues and print job redirecting

NiceWatch Enterprise

The enterprise solution for centralized integration of multi-threaded and high-volume label printing

If you want to add label printing functionality integrated into your Warehouse Management System (WMS), Enterprise Resource Planning (ERP) system, Hospital Information System (HIS) or any other type of business information system, then NiceWatch Enterprise is the perfect solution for you. NiceWatch Enterprise is a server based application that allows you to print to any number of printers simultaneously.

The enterprise module for server based printing, centralized document, printer and event management:

- **NiceWatch Server** – The high-throughput production module for enterprise-level centralized label printing integration
- **NiceLabel Enterprise Print Manager** – The enterprise module for remote printer, print queue, event and alert management
- **NiceLabel Pro** – The advanced label designer for professional bar code and RFID labeling

NiceWatch Enterprise prints large quantities of labels on multiple printers from your WMS, ERP, HIS or other systems.

NiceWatch Enterprise provides you with a:

- Multi-threaded printing technology that assures fast and faultless operation even in the most demanding environments.
- Scalable solution that does not require any programming or coding change of your information system.
- Server-based solution that enables applications and systems to initiate label printing without local software installation.

All printers in your organization can be managed from one location through the web-based **Enterprise Print Manager** module that is also part of your **NiceWatch Enterprise** environment. Real time printer status monitoring combined with a multi-channel alerting system minimizes the risk of long-lasting production line standstill and ensures that you learn immediately about a label printing error, warning or simple confirmation of an executed print job.

NiceWatch Enterprise Benefits:

- Centralized high-volume printing – multi-threaded printing technology designed for simultaneous printing on multiple printers
- Quick integration – easy implementation into all WMS, ERP and HIS environments like Oracle WMS, MSCA, SAP, Navision, QAD and others.
- Complete advanced label design – **NiceLabel Pro** label designer included
- Remote administration – Take full control of printing locally and in remote locations using a centralized printing system and printing process management.
- Multi-channel alert system – learn immediately about status changes or problems with print jobs
- Flat server licensing – NOT based on number of printers on the network
- Simple installation and maintenance - no installation on clients.
- Plus all the **Enterprise Print Manager** functionalities.

- Server based document repository allowing users to access stored labels and related documents
- Logging functionalities – centralized logging of all the information on past printing jobs, actions, errors, alerts and other events executed from any workstation in network
- Multi-channel alerting and messaging services – configure email, NetSend, RSS feed and SMS to inform about label print status, warning and errors
- Database housekeeping to manage database size
- NiceLabel Print Center management and NiceLabel client licensing
- Analyze performance of infrastructure with executive reports.
