NiceDrivers - the first bidirectional drivers are now available for download at NiceLabel.com website

Slovenia, February 15th – Euro Plus, developer of NiceLabel, the professional labeling software, is sending to the market a new version of NiceDrivers, the bidirectional drivers.

Bidirectional printer drivers are the next level in the evolution of thermal printer drivers industry and they represent a significant step towards satisfying customer's demands for faultless high-speed printing.

“Standard Windows printing is a one way process, where user does not get much feedback information after the print job is sent to Windows and this is far from optimal workflow demands that are common nowadays” says Uros Podlogar, head of driver development in Euro Plus. “Generally, we've made a selection of printers that are supporting bi-directional communication and we've designed additional printer driver components that enable status detection. Status requests are sent to the printer on regular intervals or before each label is printed. If any errors are detected, printing process is paused until the error is removed.”

Corporate environments with larger production and distribution facilities can now take the advantage of the Status monitor utility, a tool added to the NiceLabel bi-directional printer driver that monitors one or more printers, also on remote locations. User can check a real-time status for each printer from one location and react in time if any problems occur. That is a great prevention from production line breakdown related costs.

“From a technical point of view I can say that printer administrators will benefit from facts that monitoring includes standard and printer specific error messages. For some printers additional dialogs are implemented, where user can check and change certain printer specific parameters” Uros Podlogar underlines some of the technical characteristics.

All these exciting new features are available for free in NiceDrivers distributions and can be downloaded from www.nicelabel.com

About NiceLabel

NiceLabel is a family of professional labeling software products that provide a complete bar code printing solution to desktop and enterprise users. It is available in three editions: Express, Pro and Suite. NiceLabel is translated in 23 different languages. Its power is unleashed in combination with over 1000 true Windows thermal printer drivers. Thoughtfully designed user interface, rich integration options and unique data-entry application provide the quickest and most productive label design and printing possibilities. For more details, please visit the NiceLabel web site at <http://www.nicelabel.com>.

About Euro Plus

Euro Plus is one of the world's major software and service providers in the area of Automatic Identification and Data Collection. The company is recognized for the state of the art labeling software and true Windows drivers for thermal printers. As a Microsoft Certified Partner and Oracle Certified Partner, Euro Plus presents a perfect business opportunity for all those searching for a highly capable and reliable partner for years to come. The company is headquartered in Kranj, Slovenia, Europe. More information is available at <http://www.europlus.si>.
