New 3.6.4 Version of NiceLabel Software Released

More RFID smart label enhancements added to bar code label software

Kranj, June 8, 2004 – Euro Plus, a leading supplier of printing software for Automatic Identification and Data Collection industry (AIDC), is proud to announce the release of NiceLabel version 3.6.4, The Professional Labelling Software. In combination with the already easy and powerful features, the new NiceLabel 3.6.4 adds additional RFID smart label features to the industry's leading RFID smart labelling software.

NiceLabel Pro has been updated with a new user interface to allow more specific control over the individual data blocks in a RFID smart label tag. The user has the ability to choose if the data block is encoded with ASCII or Hexadecimal characters and if the data block is locked - preventing further data encoding. In addition, features have been added to guide the user through RFID tag programming. NiceLabel will automatically adjust the amount of writable data blocks based on the type of tag chosen. NiceLabel will also inform the user as to the available bytes in a single data block. For users who need to print the unique identification code pre-programmed into each RFID tag, NiceLabel now allows reading and printing of this code for thermal printers that support this feature. These tools enable users to easily and accurately program RFID smart labels.

NiceLabel Pro includes support for programming any EPC compliant RFID tag as well as Tag-It, I-Code, ISO 15693 and other tags. NiceLabel also supports RFID smart label printing to printers from Avery, Imaje, Datamax, Markpoint, Novexx, Printronix, Sato, TEC, Tyco and Zebra.

NiceLabel 3.6.4 adds features to facilitate high quality colour and graphics printing on thermal printers. Features for two-sided, multicolour printing and advanced dithering have been added. New driver and software features allow the user to configure printer settings to recognize each colour used on the ribbon spindle of a colour thermal printers. Additional information available on <http://www.nicelabel.com>

About NiceLabel

NiceLabel is a family of professional labeling software products that provide a complete bar code printing solution to desktop and enterprise users. It is available in three editions: Express, Pro and Suite. NiceLabel is translated in 22 different languages.
