New 3.6 version of NiceLabel released!

Euro Plus announces true Unicode support, added support for Japanese & Ukrainian language and additional major enhancements in new NiceLabel 3.6 version.

Kranj, October 28th, 2003 – With a new 3.6 version of NiceLabel, The Professional Labeling Software, Euro Plus presents features that provide a significant impact to users who need to print multi-lingual labels on thermal printers with a powerful, reliable and simple labeling tool.

“The most important features implemented in the new 3.6 version include true Unicode support, support for Japanese and Ukrainian languages, new label design features, enhanced control over label printing and improved Windows CE support,” said Matej Košmrlj, NiceLabel Product Manager. “Now there are no restrictions when printing multi-lingual labels and the new release is ready to be used in all international markets.” Košmrlj adds.

True Unicode support introduced in version 3.6 enables users to actually use characters from different code-pages (languages) inside the same text element. Multilingual text (for example: Cyrillic, Hebrew, Chinese, etc.) can be entered manually from keyboard or be imported from a Unicode database where the same field contains data formatted in different languages.

It is even possible to copy/paste Unicode data from other applications into a NiceLabel label template. All data on the label (fixed, variable and from a database)

will be handled in NiceLabel Pro 3.6 as Unicode data, recognized and printed as such.

This function is ideal for multi-national enterprises with complex, networked, multi-language labeling requirements; an example of such companies are in the chemical, textile, pharmaceutical and manufacturing industries.

The label design environment was further enhanced with many new features, like a special “Stock Management” tool, which is an entirely new built-in component. The default NiceLabel installation already includes a library of stocks from major label manufacturers, while users can also update the stock database on their own. The users will even have the ability to display custom messages when minimum label quantities are reached as a result of label printing.

The leading printing application for Windows CE/Pocket PC platform, Pocket NiceLabel, was also improved. Pocket NiceLabel has made strides to become an even more unique solution for mobile label printing. The new version ensures better operations and implements numerous internal improvements like support for NiceLabel functions, EAN.UCC 128 bar code printing, date offset (useful for expiration dates) and more.

Once again, NiceLabel – The Professional Labeling Software, proves itself as the most advanced, most reliable and up-to-date labeling software available. With fast and flexible development it's easy to follow market demands and stay ahead of the competition.

To familiarize yourself with all of the new, improved or existing features of the NiceLabel software family, please visit the NiceLabel web site – <http://www.nicelabel.com> - or contact the NiceLabel sales staff.

About Euro Plus

Euro Plus is one of the world's major software and service providers in the area of Automatic Identification and Data Collection.
